

What is claimed is:

1. A vehicle mounted control apparatus comprising:

voice recognition section for recognizing a voice command
that a user inputs by means of voice input device connected
5 to outside; and

a control section that analyzes a cause of incapability
of recognition of the voice command when the voice command cannot
be recognized by the voice recognition section and changes a
display format of a screen of display device connected to outside
10 on the basis of a result of the analysis.

2. A vehicle mounted control apparatus comprising:

voice recognition section for recognizing a voice command
that a user inputs by means of voice input device connected
to outside;

15 a control section that analyzes a cause of incapability
of recognition of the voice command when the voice command cannot
be recognized by the voice recognition section; and

a storage section that previously stores a display format
corresponding to a result of the analysis,

20 wherein the control section reads the display format
corresponding to the result of analysis from the storage section
and changes a display format of a screen of display device
connected to outside on the basis of the read display format.

3. The vehicle mounted control apparatus as claimed in claim
25 1, wherein the display format is a display format of an icon
displayed on the screen.

4. The vehicle mounted control apparatus as claimed in claim
2, wherein the display format is a display format of an icon
displayed on the screen.

30 5. The vehicle mounted control apparatus as claimed in claim

3, wherein the display format of the icon is a color of the icon displayed on the screen.

6. The vehicle mounted control apparatus as claimed in claim 4, wherein the display format of the icon is a color of the icon displayed on the screen.

7. A vehicle mounted control apparatus comprising:

voice recognition section for recognizing a voice command that a user inputs by means of voice input device connected to outside;

10 a control section that analyzes a cause of incapability of recognition of the voice command when the voice command cannot be recognized by the voice recognition section and changes a display format of a screen of display device connected to outside on the basis of a result of the analysis,

15 wherein the control section provides the user with a structure of the voice command to be input by the user.

8. The vehicle mounted control apparatus as claimed in claim 7, wherein the control section provides the user with the structure of the voice command, which is to be input by the user, 20 by displaying the structure on the screen of the display device connected to outside.
